**Know what's below.
Call before you dig.**

Great Plains Natural Gas Co. operates and maintains all natural gas piping through your gas meter in accordance with federal Gas Pipeline Safety Regulations.

▶ Your buried gas lines downstream of (beyond) the meter should be similarly monitored for corrosion and leakage. If unsafe conditions are found, buried lines must be repaired or disconnected.

- ▶ When you excavate, you must call a professional to locate gas lines in advance. The excavation around the piping must be done by hand.
- ▶ Plumbing and heating contractors in your area can provide locating, inspecting, new installation and repair services on your downstream buried pipes.
